Setup And Configure A LAN (Local Area Network) Using A Switch And Ethernet Cables In Your Lab

Aim: To setup and configure a LAN (Local Area Network) using a switch and ethernet cables in your lab

Steps To Setup An LAN:

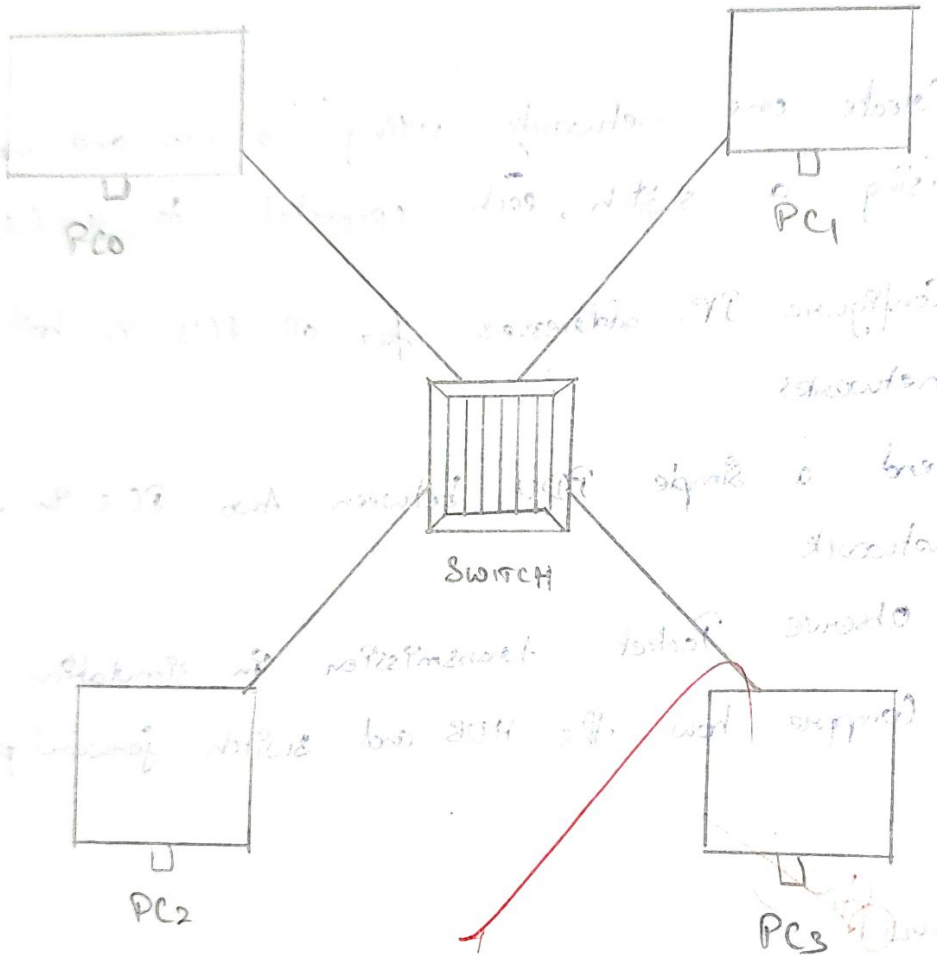

Step 1: Plan and Design an appropriate network topology taking into account network requirements and equipment location.

Step 2: Take 4 Computers, a switch with 8, 16 or 24 ports which is sufficient for networks of these sizes and 4 Ethernet cables.

Step 3: Connect the computers to network switch via an Ethernet cable, which is as simple as plugging one end of the Ethernet cable into the computer and the other end into the network switch.

Step 4: Assign IP address to your PC's

1. Log on to the client computer as Administrator or as owner.
2. Click network and Internet Connections.
3. Right click Local Area Connection / Ethernet -> Go To Properties -> Select Internet Protocol (TCP/IPV4) -> Click on Properties -> Select use the following

PC0
PC1
SWITCH
PC2
PC3

ip address option and assign ip address.

STEP 5: Configure a network switch.

1. Connect the computer to the switch
2. Log in to the web interface
3. Configure basic settings
4. Assign IP address as 10.1.1.5, subnet mask 255.0.0.0.

STEP 6: Check the connectivity between switch and other machine by using ping command in the command prompt of the device.

STEP 7: Select a folder → go to properties → click sharing tab → share it with everyone on the same LAN.

STEP 8: Try to access the shared folder from others computers of the network.

RESULT:

A Local Area Network (LAN) was successfully setup using one Network switch, four computers and the Ethernet cables.
